Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	SWTID-2026-4475
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIN
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Client Script Implementation (Incident)	Create onChange client script on the Incident form Create onLoad client script on the Incident form Validate and auto-populate fields (e.g., Category, Priority)
FR-4	UI Policy Implementation (Incident)	Make fields mandatory based on conditions Show / hide fields based on conditions Make fields read-only based on conditions

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	Dynamic form behaviour (mandatory, hidden and read-only fields) guides users to fill the Incident form quickly and correctly.
NFR-2	**Security**	Only authorized roles can create or modify client scripts and UI policies; field access follows role-based ACL rules.
NFR-3	**Reliability**	Client scripts and UI policies run consistently on every Incident form load and field change, without errors.
NFR-4	**Performance**	Scripts are lightweight, so the Incident form loads and responds to field changes without noticeable delay.
NFR-5	**Availability**	Form validations remain available whenever the ServiceNow instance is accessible, with no extra downtime.

NFR-6	**Scalability**	New client scripts and UI policies can be added or extended for more fields or tables without redesign.
